# **Bootstrap Grid System**

⟨ Previous (bootstrap\_filters.asp)

Next > (bootstrap\_grid\_stacked\_to\_horizontal.asp)

## **Bootstrap Grid System**

Bootstrap's grid system allows up to 12 columns across the page.

If you do not want to use all 12 column individually, you can group the columns together to create wider columns:

Bootstrap's grid system is responsive, and the columns will re-arrange depending on the screen size: On a big screen it might look better with the content organized in three columns, but on a small screen it would be better if the content items were stacked on top of each other.

Tip: Remember that grid columns should add up to twelve for a row. More than that, columns will stack no matter the viewport.

## **Grid Classes**

The Bootstrap grid system has four classes:

- xs (for phones screens less than 768px wide)
- sm (for tablets screens equal to or greater than 768px wide)
- md (for small laptops screens equal to or greater than 992px wide)
- 1g (for laptops and desktops screens equal to or greater than 1200px wide)

The classes above can be combined to create more dynamic and flexible layouts.

Tip: Each class scales up, so if you wish to set the same widths for xs and sm, you only need to specify xs.

## **Grid System Rules**

Some Bootstrap grid system rules:

- Rows must be placed within a .container (fixed-width) or .container-fluid (full-width) for proper alignment and padding
- Use rows to create horizontal groups of columns
- · Content should be placed within columns, and only columns may be immediate children of rows
- Predefined classes like .row and .col-sm-4 are available for quickly making grid layouts

" Grid columns are created by specifying the number of 12 available columns you wish to span. For example, three equal columns

■ML (/html/default.asp) CSS (/css/default.asp) JAVASCRIPT (/js/default.asp) SQL (/sql/default.asp) PYTHON (/python/default.asp)

would use three .col-sm-4

• Column widths are in percentage, so they are always fluid and sized relative to their parent element

## Basic Structure of a Bootstrap Grid

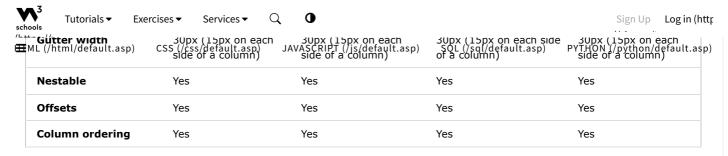

The following is a basic structure of a Bootstrap grid:

So, to create the layout you want, create a container ( <div class="container">). Next, create a row ( <div class="row">). Then, add the desired number of columns (tags with appropriate .col-\*-\* classes). Note that numbers in .col-\*-\* should always add up to 12 for each row.

# **Grid Options**

The following table summarizes how the Bootstrap grid system works across multiple devices:

	Extra small <768px	Small >=768px	Medium >=992px	Large >=1200px
Class prefix	.col-xs-	.col-sm-	.col-md-	.col-lg-
Suitable for	Phones	Tablets	Small Laptops	Laptops & Desktops
Grid behaviour	Horizontal at all times	Collapsed to start, horizontal above breakpoints	Collapsed to start, horizontal above breakpoints	Collapsed to start, horizontal above breakpoints
Container width	None (auto)	750px	970px	1170px
# of columns	12	12	12	12
